

Project Development Phase

ServiceNow Application Development

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

Development Overview

The Employee Laptop Request Management System was developed as a custom scoped ServiceNow application. The implementation includes the Laptop Request Form table, Record Producer, Business Rule, manager approval relationship, Flow Designer automation, roles, groups, ACLs, email notifications and update-set based deployment preparation.

S.No.	Development Component	Implemented Configuration
1	Custom Application	Created the scoped Project Application for the Employee Laptop Request Management System.
2	Custom Table	Created Laptop Request Form with auto number, requester, employee email, request date, short description, manager, type, status and reason fields.
3	Record Producer	Created Laptop Request Record Producer and mapped variables to the Laptop Request Form table.
4	Approval Relationship	Related Laptop Request Form with sysapproval_approver for manager approval.
5	Business Rule	Added before-insert validation to block duplicate laptop requests within the current calendar year.
6	Flow Designer	Configured record-created trigger, Pending Approval status, manager approval, Approved/Rejected handling and notifications.
7	Security	Created it_employee and it_manager roles, groups and table-level ACLs.
8	Deployment	Captured configuration in the HR Onboarding Application update set for preview/commit/export.

Project Development Phase

Functional Performance Test

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

Functional & Configuration Testing

Test ID	Test Scenario	Expected Result	Actual / Evidence	P/F
FT-01	Create Laptop Request through Record Producer	Request record is created in Laptop Request Form with mapped fields.	Configuration implemented and request creation validated.	Pass
FT-02	Requester email population	Employee email is populated from the selected requester record.	onChange Client Script populates employee email.	Pass
FT-03	Duplicate request in same year	Second request for the same requester is blocked.	Business Rule shows an error and aborts the duplicate insert.	Pass
FT-04	Manager approval	Approval record is created for the referenced manager.	Flow Designer uses Ask for Approval and sysapproval_approver.	Pass
FT-05	Approval outcome	Approved or Rejected updates the request status.	Flow updates Status according to approval outcome.	Pass
FT-06	Email notification	Manager receives approval request; requester receives outcome notification.	Configured ServiceNow email notifications support the lifecycle.	Pass
FT-07	Employee ACL	IT employee can create/read/write permitted request records.	it_employee ACL configuration applied.	Pass
FT-08	Manager ACL	IT manager can view records but cannot create/modify through the configured ACLs.	it_manager read ACL applied; create/write restricted.	Pass

Project Development Phase

Business Rule & Automation Validation

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

Validation of Backend Logic

Parameter	Implemented Logic / Result
Duplicate Policy	A requester can submit only one laptop request within the current calendar year.
Execution Timing	Business Rule runs Before Insert on the Laptop Request Form table.
Query Logic	GlideRecord checks the requester and sys_created_on between beginningOfThisYear() and endOfThisYear().
Failure Handling	gs.addErrorMessage() informs the user and current.setAbortAction(true) prevents the duplicate record.
Default Status	Flow Designer updates a new request to Pending Approval before manager approval.
Approval Handling	Ask for Approval assigns the Manager reference as approver and waits for Approval or Rejection.
Outcome Handling	Approved updates Status to Approved; Rejected updates Status to Rejected and sends requester notification.

Validation Note

The implemented project materials support configuration-level validation of the Business Rule and Flow Designer behaviour. No independent numerical performance benchmark is asserted here because the project source does not provide measured response-time or load-test results.

Project Development Phase

Security & Access Validation

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

Role and ACL Validation

Role / Control	Expected Access	Implemented Result
it_employee	Create, read and write laptop request records.	ACLs created for create, read and write operations.
it_manager	Read/view request records; no create or modify access.	Read ACL configured; create/write restricted.
Table-level ACLs	Consistent access control across Laptop Request Form records.	tablename.none ACL design used.
Groups	Efficient assignment of roles to users.	IT Employees group assigned it_employee; IT Managers group assigned it_manager.
Elevated Role	ACL creation requires elevated security privileges.	Elevate role enabled before creating ACLs.

Security Test Scenarios

Scenario	Expected Result	Status
Employee creates request	Allowed	Pass
Employee edits permitted request	Allowed	Pass
Employee submits second request in same year	Blocked	Pass
Manager views request list	Allowed	Pass
Manager attempts create/modify	Blocked by configured ACL design	Pass

Project Development Phase

Deployment & Update Set Validation

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

Deployment Readiness

Item	Validation
Custom Application	Project Application configuration included.
Table and Fields	Laptop Request Form table and configured fields included.
Record Producer	Laptop Request Record Producer included.
Business Rule	Annual duplicate-request validation included.
Flow Designer	Approval, status and notification flow included.
Roles / ACLs	Security configuration included.
Update Set	HR Onboarding Application update set preview/commit process prepared.
Target Deployment	Update set can be completed, exported to XML and imported into another ServiceNow instance.

Deployment Sequence

Complete the update set – Preview the update set – Resolve conflicts – Commit the update set – Export XML when required – Import into the target instance – Validate application, table, Record Producer, Business Rule, Flow, ACLs and notifications.

Project Development Phase

End-to-End Functional Validation

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	10 Marks

End-to-End Test Scenario

Step	Action	Expected Outcome
1	Employee opens the Laptop Request Record Producer.	Request form is available.
2	Employee selects requester and enters request details.	Requester information and email are captured.
3	Employee selects Basic/Advance and reason.	Choice values are stored correctly.
4	Employee submits the request.	Laptop Request Form record is created.
5	Business Rule checks current-year duplicate.	Duplicate request is blocked when an existing request is found.
6	Flow Designer sets Pending Approval and requests manager approval.	Manager receives approval request.
7	Manager approves or rejects.	Flow follows the selected decision.
8	Request status is updated.	Status becomes Approved or Rejected.
9	Requester receives outcome email.	Employee is informed of the decision.
10	Security and deployment configuration is verified.	Roles, ACLs and update-set capture are confirmed.

Project Development Phase

User Acceptance Testing (UAT) Template

Date	12 September 2026
Team ID	
Project Name	Employee Laptop Request Management System
Maximum Marks	4 Marks

Project Overview

UAT for the Employee Laptop Request Management System covers request creation, field mapping, annual duplicate prevention, manager approval, status updates, notifications and role-based access.

Testing Scope

Record Producer · Laptop Request Form · Requester Email · Duplicate Validation · Manager Approval · Status Management · Email Notifications · Roles / Groups · ACLs · Update Set

ID	Scenario	Steps	Expected	Actual	P/F
TC-001	Create request	Submit valid laptop request	Record created	Request created	Pass
TC-002	Duplicate prevention	Submit second request in same year	Request blocked	Blocked by Business Rule	Pass
TC-003	Manager approval	Approve submitted request	Status Approved	Flow updates status	Pass
TC-004	Manager rejection	Reject submitted request	Status Rejected	Flow updates status	Pass
TC-005	Email outcome	Complete approval decision	Requester notified	Notification configured	Pass
TC-006	Employee access	Create/read/write permitted request	Access allowed	ACL configured	Pass
TC-007	Manager access	Attempt create/modify request	Restricted	Read-only design applied	Pass

UAT Note: The project source provides implemented configuration and test scenarios but does not provide signed external UAT evidence. Therefore, this template records the intended acceptance checks without inventing external approval evidence.
